

# Application of the product

The product goes clever for its use,  
 1 kilo of product covers 2 m2 aprox. depending on the thick of the drop.

The mouthpiece of the gun should be of 2 mm. to 2'8 mm.  
 The hose has to be minimum of 10mm. of interior diameter and of about 3 meters of longitude, the tank of those that have the exit for below and that you can to vary the pressure of the air and of the product.

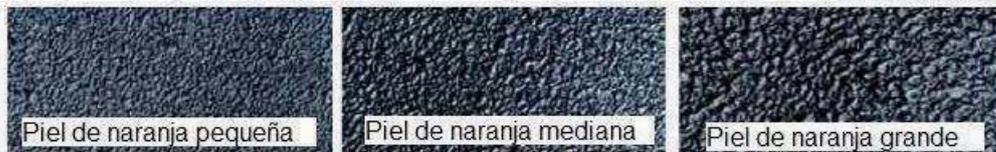

1<sup>a</sup> hand (flat) product pressure in tank 1-2 kgs. pressure of air in hose 4-5 Kgs.

Not it is necessary to sand the surface

2<sup>a</sup> I flow (drop) product pressure in tank 1-2 Kgs. pressure of air in hose 1'5-3Kgs.  
 All more pressure in hose and less pressure in finer tank the drop.  
 You can vary the pressures according to the type you can textured that is wanted to make.

Examples of pressures for textures (The pressures and the distances are orientativas, they can vary according to the used equipment)
